

# Jack Pine

Jack pine is produced predominantly as SPF\* lumber in structural grades according to National Lumber Grades Authority (NLGA) rules for dimension lumber. In this form, Jack Pine should be widely available as construction lumber for a modest price. It is used in building construction as framing, sheathing, scaffolding and interior woodwork. Jack pine is also used for boxes and crates. Other uses of jack pine include power poles, railroad ties and treated posts.

## Grading System

SPF Lumber is graded in the same way in all parts of Canada, according to the rules written by the National Lumber Grades Authority (NLGA).
