

White Oak

The most common White Oak, *Quercus alba*, grows throughout eastern North America from Florida northward to southern Quebec. It is a long-lived species typically living well past 200 years. It generally achieves heights of 65' to 85' with diameters of 3' to 4'. The wood is hard, tough and durable, prized in boat and shipbuilding because it steam bends well. White Oak is also used in fine furniture, flooring, cabinetry, interior trim, and decorative veneer.

Grading System

SPF Lumber is graded in the same way in all parts of Canada, according to the rules written by the National Lumber Grades Authority (NLGA).
